

INFECTION PREVENTION LEARNING INSTITUTE

**HOW DO YOU EDUCATE ALL THE PEOPLE
PERFORMING WORK IN YOUR HOSPITALS
WITH THE REQUIRED TRAINING?**

HERE'S HOW A TOP RANKED HEALTH CARE SYSTEM APPROACHED FINDING A SOLUTION TO A CONTINUAL PROBLEM

The Construction (PD&C) Directors along with Facility Managers and Infection Prevention established five goals for a Contractor/Vendor Education Program:

- Educate and document each person entering the facility on COVID-19 work requirements
- Comply with the CDC guidelines for providing annual Infection Control Awareness training to everyone working in the hospital environment
- Track training compliance in just one location through one system
- Minimize internal employee time involvement in operating the training program and minimize costs to operate the program
- Provide the educational program with one consistent message across the enterprise and make it available on a 24/7 basis

Solution

All Five Goals Met & Exceeded

Infection Prevention Learning Institute (IPLI) met the challenge and exceeded the established goals by creating a CLOUD based solution. Let's look at how this worked on each challenge:

- An educational program was developed by IPLI that met the goals of the Facility Managers, the Construction, Planning & Design Director, and the Infection Prevention Managers. The training program covered the three required issues:
 - Educate and document each person entering the facility on COVID-19 work requirements
 - Incorporate the CDC requirements for providing annual Infection Control Awareness training to everyone working in the hospital
 - Cover training on internal safety regulations and facility rules
- With one educational message containing all the items listed above, the health system was delivering a consistent message each time and a test at the end of the training to verify understanding.
- All the training records along with COVID vaccination status are kept in just one spot – the CLOUD. The records are accessible by managers anytime they want with just a few clicks of a mouse.
- The only time internal staff had to do anything related to the training was to remind contractors and vendors to take the course. No more tracking who has been trained, sending out reminders concerning training expiration, or keeping records. The burden has been lifted.
- Since the training is positioned on the CLOUD, it is accessible for anyone 24/7 from any smart device. This solution completely eliminated the need to set up internal training classes. Now they just point to the CLOUD and smile.

We can send you a sample training program template to aid in saving your team time in creating a program to meet your facility's needs. Just ASK.

YOUR CUSTOMIZED EDUCATION PROGRAM WILL INCLUDE THESE THREE IMPORTANT PARTS

Part 1: **COVID REQUIREMENTS**

Educate everyone on the COVID-19 related mandatory work practices

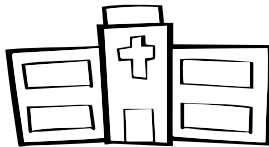

INFECTION CONTROL
AWARENESS

Part 2: **INFECTION CONTROL AWARENESS REQUIREMENTS**

CDC Guidelines specific training concerning Infection Control Awareness - keeping patients safe

FACILITY OR HEALTH
SYSTEM PROTOCOLS

Part 3: **FACILITY SPECIFIC WORK REQUIREMENTS**

Your customized program will include specific facility safety requirements you want workers to understand

Ask for a sample training program template to aid in saving you time in creating one just for you needs.

89%

FACTS to Consider

Healthcare Associated Infections (HAIs) actually increased during COVID and with hospitals back in full service HAI reduction should be a major focus of all hospitals.

89% of vendors working in the facility do not know how their work can cause an HAI.

Keeping up with training and educating every worker is an impossible task for facility managers, construction managers and infection preventionists.

Current training is not uniform in delivery or content and no testing occurs.

Training records are sometimes spread across multiple facilities or contractors and are not in one place where they can be accessed 24/7.

Pricing

Hospital

The actual customized Training Program

We provide you with a training program template for your team to use as a time-saving guide on what should be in your facility's program. The program will cover COVID work requirements, Infection Control Awareness training, as well as facility safety protocols. You edit to your liking. We prepare the program, record it, and post it to the cloud. We also add a test that each student takes to verify the learning process.

Hospital Pays one time fee: \$500

Training and Testing of the Contractors and Vendors

Contractor/Vendor Payment Options

Since each health system wants options, we provide three different options on who pays for the training:

- Each contractor can pay for their workers
\$38 each annually
- The Hospital can elect to pay the training fee for each worker and can be invoiced quarterly
\$38 each annually
- A General Contractor can be responsible for all the workers including subs and can be invoiced quarterly
\$38 each annually

OPTIONAL EQUIPMENT

Check-In Kiosk from TouchSource

An intelligent device saves both time and cost

Infection Prevention Learning Institute teamed up with TouchSource to introduce a complete contactless contractor check in process. TouchSource is the leading provider of interactive digital displays and now their kiosks can be armed with intelligent check in devices tied to your training program.

This Wellness Kiosk option not only takes the vendors' temperature, provides hand sanitation it also scans who they are and tracks training and COVID vaccination status.

Try and guess the cost of this intelligent option, we think you will be pleasantly surprised.
